ANTECEDENTES

Mycetoma is a chronic, progressively destructive infectious disease of the subcutaneous tissues, affecting skin, muscle and bone. Mycetoma occurs in tropical and subtropical environments characterized by short rainy seasons and prolonged dry seasons that favour the growth of thorny bushes. This course addresses the epidemiology of mycetoma, clinical features, diagnosis, treatment, and public health interventions.

OBJETIVOS DEL EVENTO

- Explain the epidemiology of mycetoma;
- Describe the clinical aspects;
- Explain how the diagnosis is made;
- Explain how to treat mycetoma; and
- Describe the public health interventions.

PÚBLICO OBJETIVO

National and front-line health workers
